## + Automic® accelerates monitoring, mgmt, & reporting

Automic's graphic interface (GUI) has a more modern look and feel and will give your users an easier way to consume and report on data, as they monitor and manage their workflows.

## + With its object reusability, Automic® requires fewer jobs

Due to Automic's object variables, 150,000 jobs in other workload solutions could translate to 20,000 jobs in Automic. Variables can be applied to objects and flows, so a single job has much more versatility in Automic than other schedulers. Fewer jobs equates to scalability gains, reduces job failure rates, and lowers overall cost of ownership. The trade-off is simplicity and granularity. For all this additional capacity and power, Automic only requires marginally higher operator proficiency.

## + The future seems more certain for Automic®

Workload Automation users are constantly watching vendors devour other software vendors, cut their staff, and lower their reinvestment strategies, while still increasing renewal rates. That translates into vast uncertainty for those who utilize their Workload Automation products. In contrast, Broadcom continues to reinvest heavily in Automic Automation, its flagship Workload Automation product. With 5 billion invested annually on Broadcom R&D, Automic received continuous Cloud investments, SaaS offerings, and additions to its 300+ out-of-the-box integrations.
