Workload Automation Conversions

Future-Proof Your App Stack with Friction-Free Workload Modernization

Escape legacy solutions (like TIDAL and IBM Workload Scheduler) to **improve reliability and performance.**

IWS
TIDAL

High-performing, scalable services are the new normal. But true modernization requires **risk prevention, expert management, and the right Workload Automation** solution.

We've performed 130+ conversions for the Fortune 1000 — without hiccups.

▶ We understand the **nuances and common challenges** of converting off legacy tools, and we'll guide you through the semantic and operational differences

▶ Where it makes sense, we'll **duplicate** your current processes, procedures, and integrations

▶ We know your current **technology gaps.** We'll help you understand and fill them

▶ We'll help you understand what apps are stand-alone and less critical, so you can migrate them first, **prove-out** the methodology, and reduce risk with your entire line up

▶ We'll utilize conversion toolsets for **automated job conversion**

▶ We'll offer training **when you need it,** so you can confidently take over support when we leave

Our Approach

Automate your most complex business processes with flexible, simplified integrations. We'll help architect and deploy the solution, mitigate transition risk, and enhance visibility and workload control.

TIME

There is no one-size-fits-all solution. We'll take the time to understand your business and organizational context. Your Workload Automation solution must be able to grow with your business.

ALIGN

We'll align your Workload Automation to your digital transformation plan — from understanding inefficiencies to reviewing the requirements that will meet your future demands.
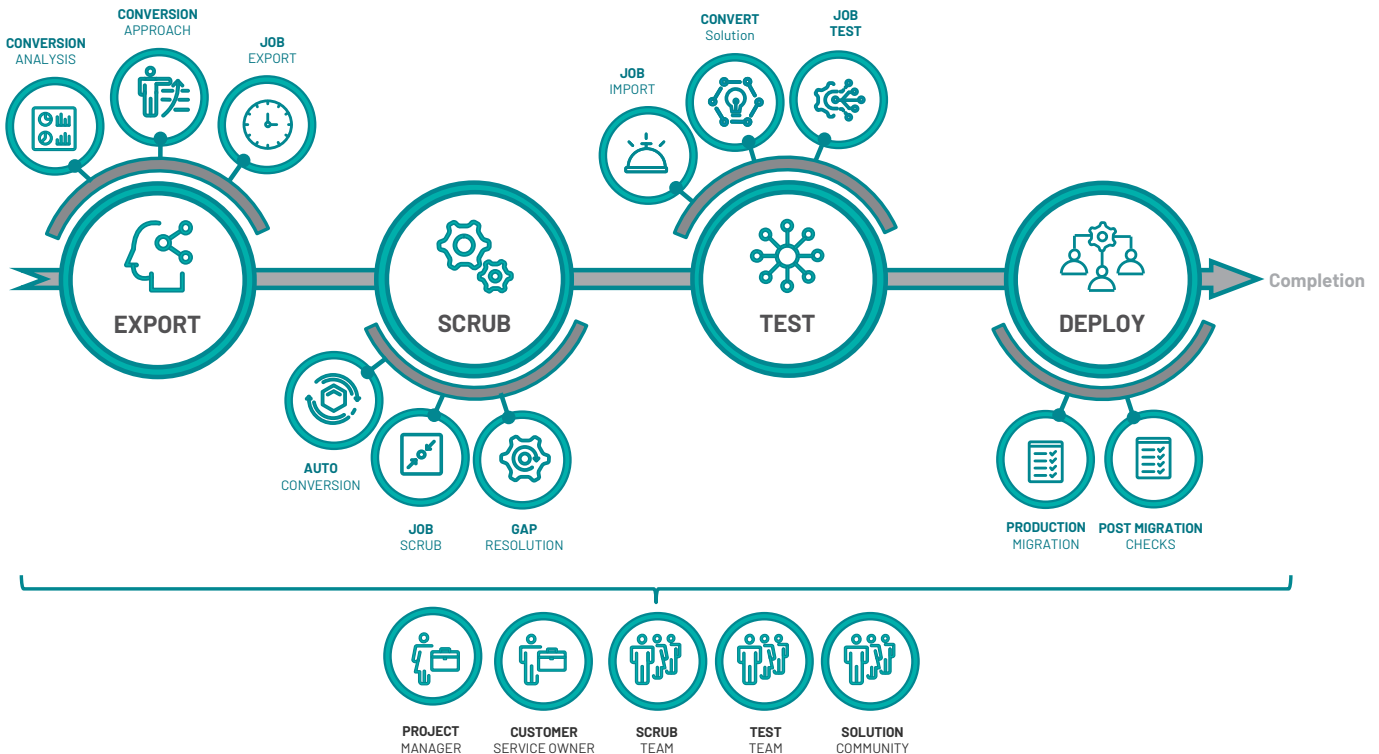

AUTOMATE

We have the capabilities and experience to help you achieve real-time, event-driven orchestration of business services, so you can deliver sustainable results.

▶ How does our conversion methodology mitigate risk?

Easily. We use a factory approach:

First, we group applications based on their dependencies. Then each group follows a conveyor belt methodology to ensure rapid conversion through each phase on its way back to production — with no down time.

Low Risk Modernization

Common questions and concerns for application teams

▶ **Will I need to change my programs?**

Absolutely not. The conversion simply updates the engine executing your existing programs, applications, and scripts.

▶ **Is job flow in the application going to change?**

In most cases, the answer is no. The conversion process keeps your conditions and dependencies, including your schedules and start times.

▶ **Am I expected to participate in scheduler testing?**

Following full job conversion, your application teams may conduct testing. We recommend limiting this to a subset of jobs, with minimal involvement from the teams.

▶ **What if there's a problem during the go live?**

Don't worry. We'll be engaged and available until your last group goes live in the clear.

▶ **How do the application teams get trained for the conversion?**

Our training is modularized, allowing for customization to meet your specific needs.

▶ **What modern WLA solution do you recommend?**

We're a **Tier 1** reseller of the top Workload Automation solutions. One high value solution is **Automic**® Automation by Broadcom Software. We may refer you to this solution or others, depending on your needs.

Modernizing Workload Automation will help you:

Achieve greater efficiency by optimizing and automating complex workloads and freeing up valuable resources to work on more **business-critical**, high-value work.

Reduce **time-to-market** for new products and services, and boost responsiveness to customer demands by automating the most repetitive development tasks.

Realize significant **cost savings**, higher productivity, and better regulatory compliance by eliminating many tedious, manual activities from human, error-prone processes.

Reduce Cost and Complexity

Leverage our experience to make your move.

Managing **industry-leading Workload Automation** environments is **all we do,** and we do it well. We've performed over **1,300** professional service engagements with some of **the largest and smallest** organizations in the world.

As the only player specializing in WLA with both onshore and offshore capabilities, we offer **end-to-end** Workload Automation services, including Conversions (Migrations), Implementations, Upgrades, Training, Managed Services, and NOC Services in line with your budget.

Connect with an expert on our team to **learn more** about how to set up a successful digital transformation.
