

Run Oracle Fusion on *one schedule*

Automic, Broadcom's automation platform, connects to Oracle through three integrations—Fusion Cloud ERP (including HCM), EPM Cloud and OCI for Oracle Integration Cloud—so jobs, files, reports and handoffs run on one schedule.

WHAT WE'VE AUTOMATED

01 Advanced scheduling for every Oracle job

Automic job objects add dependencies, conditions and calendars across the Oracle integrations, so complex job chains run without manual tracking.

02 Financial processing starts on its own

General Ledger journals and supplier invoices start processing without someone kicking them off.

03 Data pipelines start on verified files

Downstream pipelines trigger only after Automic validates the file move.

04 Orchestration beyond the General Ledger

Payroll and workforce processes become part of the same enterprise schedule as finance.

05 Finance gets its deliverables on time

Job execution connects directly to the reconciliation reports finance leads need.

06 One schedule across Oracle clouds

Multi-product workflows run across separate cloud environments under a single schedule.

HOW AUTOMIC DELIVERS IT

ENTERPRISE SCHEDULER SERVICE (ESS) & JOB SETS

Automic submits and monitors standard ESS jobs and complex job sets, passes their parameters, and handles parent/child relationships automatically.

FILE INGESTION & UNIVERSAL CONTENT MANAGEMENT (UCM)

Automic stages inbound files with the **UPLOAD_FILE_TO_UCM** job object, then runs the data loads.

DATA EXTRACT & BI CLOUD CONNECTOR (BICC)

Automic extracts data to external data warehouses with **SUBMIT_BICC_REQUEST** and checks file integrity with MD5 verification.

HUMAN CAPITAL MANAGEMENT (HCM) & FLOW ACTIONS

Automic runs **HCM_DATA_LOAD** and **RUN_FLOW** to handle payroll and workforce reference data.

FINANCIAL REPORTING & OTBI

Automic runs **SCHEDULE_REPORT**, validates the run and returns the finished report to Automic.

END-TO-END ORCHESTRATION ACROSS ORACLE EPM & INTEGRATION CLOUD

Once Automic confirms the Fusion tasks are complete, it hands them to Oracle EPM for planning aggregation and to Oracle Integration Cloud through the OCI agent.

Book a free 30-minute *close workflow review*

Bring one close workflow with painful handoffs. We'll map the steps and show where Automic returns time. Scan the code or visit robertmarktech.com/oracle-fusion
